

## MyStandards: Standards implementation made simple

### Benefits for you

- Reduce time, cost, effort and risk to manage your standards
- Centralise and streamline your standards guidelines
- Automate, simplify and harmonise your standards release communication
- Increase customer satisfaction

### Benefits for your corporates

- Access user-friendly standards documentation
- Ease implementation of your guidelines and facilitate compliance
- Receive bank-specific guidelines in a bank-neutral format

## MyStandards for my corporates

*Increase internal efficiency and satisfy customers with state of the art on-boarding tools*

Do you regularly need to onboard new corporate customers and provide them with standards information?

Do you need to consult and follow the latest market practices in the corporate-to-bank space?

Would you like to create your own guidelines for corporate customers in a structured and risk-free way?

Would you like to decrease the impact of standards releases on your guidelines?

Are you looking for an efficient and user-friendly way to share your guidelines with your customers?

Would they prefer to access and implement your information in a bank-neutral format?

**Centralise and analyse all standards-related information in a simple way**

Browse all standards information you need in a single, easy-to-use platform. Consult, analyse and compare the latest market practices in the corporate space, and use them as a basis for your own guidelines.

**Reduce time and risk to create your own guidelines**

Simply reuse existing public corporate-to-bank guidelines and tailor them with your own customer requirements with only a few clicks, thanks to a formal and intuitive method.

Drastically reduce the time it takes to analyse release impact, and compare release versions of the messages you use, as well as release impact on your guidelines.

**Offer a best-in-class service to your customers**

Share your guidelines with your customers through a single channel. Provide your customers with easy access to your specifications online, and enable them to generate simple and consistent PDF documentation, as well as processable output (XML Schemas) to facilitate implementation.

Collect online feedback from your customers and let them help you identify opportunities for harmonisation of guidelines.

### MyStandards' response:

MyStandards simplifies the creation, maintenance and communication of all your standards-related information for you and your customers. It is an innovative, collaborative web-based platform, that will help you to:

## Rich content

MyStandards centralises all standards-related content.

SWIFT and ISO 20022 provide the base standards definitions for current and future releases.

Market practice organisations and financial institutions can define usage guidelines, publish them and share their content in a 'standard' way.

Content Contributors	Type of standard content
<b>Base standards:</b> SWIFT and ISO 20022	Base Standards:MT/MX/ISO 20022
<b>Usage guidelines:</b> Market infrastructures Market practice groups Financial institutions	Global market practices Local market practices Bilateral guidelines Internal specifications

*"MyStandards is your one-stop shop for anybody having to deal with your standards, within or outside your institution."*

## Powerful set of features

MyStandards contains a set of features to help you and your customers manage end-to-end standards processes more efficiently:

Browse and search content in a common, structured way:

MTs and MXs are presented in an intuitive and user-friendly way. All usage guidelines and release information is displayed in the same standard way, enabling unambiguous interpretation.

Analyse, compare and assess immediately and efficiently:

Use the powerful analytical framework to consult change requests, compare message and usage guidelines versions, compare different sets of usage guidelines and assess release impact on the usage guidelines relevant to your business.

Capture and maintain usage guidelines in a formal, consistent way:

Use the offline editor to formally create and maintain the usage guidelines you want to share with your customers.

Capture precise requirements such as subsets of codelists, multiplicity of elements, additional rules, and much more.

Share, generate and publish documentation without manual intervention:  
Share your guidelines with your customers using a single channel, and automate the generation of PDF documents for you and your customers. Generate Excel sheets for base standards and usage guidelines, as well as practical Excel sheets for comparisons. You can also define and control who has access to your guidelines.

Generate processable output for efficient implementation:  
Generate XML Schemas for base MT and MX standards, as well as for usage guidelines. Reduce your own implementation time, and enable your customers to do the same.

Collect online feedback:  
In addition to sharing and documenting your guidelines, MyStandards provides you with a platform where you and your customers can share and consolidate feedback on draft usage guidelines.
